

KEY FEATURES

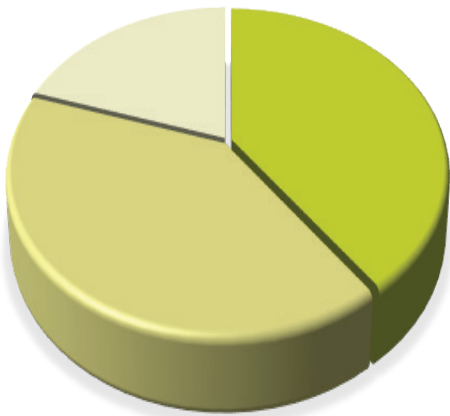

- Ideal choice for greens
- Competitive against Poa
- High disease resistance

Application Rate: 1-2 lbs/1,000ft²

Germination: 3-5 days

FUTURA PRO

BENTGRASS BLEND

- 40% MacDonald/Focus Bentgrass
- 40% MacKenzie Bentgrass
- 20% 777 Bentgrass

DESCRIPTION

Designed to produce a superior golf course green under a range of environmental and maintenance conditions. It has a broad genetic base and outstanding turf quality. Futura Pro provides a uniform playing surface with low mowing tolerance. The blended varieties match closely in appearance resulting in an attractive, dense, uniform turf that exhibits a bright, true green colour.

Futura Pro is fine textured and has high density in all seasons, providing a smooth, high quality putting surface that quickly repairs ball marks and stands up to heavy traffic. It produces a putting surface with increased resistance to Brown Patch, Pink Snow Mold, Dollar Spot, Leaf Spot Pythium and most environmental stresses. First emergence 3-5 days after planting. First mowing can be expected in 21 days.
